PROPOSED AMENDMENT – DO NOT ENTER

1. (currently amended) A method for retrieving information using a server system coupled to a centralized database and at least one client system, said method comprising:

storing user preference information in the database including a list of functions defined by a user of the at least one client system for inclusion within a function menu, wherein each function is associated by the user with at least one universal resource locator (URL) and a computer-implemented command for performing the associated function,

wherein the computer-implemented command is configured by the user to perform the associated function at at least one remote vendor web server corresponding to the at least one associated URL; and

wherein the command comprises at least two separate processing requirements to perform the associated function;

displaying the function menu on the client system to prompt the user to select a desired function from the list of user-defined functions included within the function menu to apply the selected function to a selected object, wherein the selected object is an object included within an electronic document displayed on the at least one client system and identified selected by the user;

receiving, at the server system, the selected object and the selected function from the at least one client system;

processing the selected object by sequentially applying the at least two separate processing requirements to applying apply the selected function to the selected object at the server system to generate a processed object, the processing further includingcomprising:

retrieving from the database the at least one URL and the computer-implemented command associated with the selected function;

10894243_1.DOC   2

executing a first one of the processing requirements of the retrieved computer-implemented command using the selected object to generate the a first processed object;

transmitting the first processed object from the server system to at least one remote vendor web server corresponding to the at least one retrieved URL;

executing a second one of the processing requirements of the retrieved computer-implemented command using the selected object to generate a second processed object;

transmitting the second processed object from the server system to at least one remote vendor web server corresponding to the at least one retrieved URL;

receiving a processing result from the at least one remote vendor web server at the server system, the processing result generated by the at least one remote vendor web server based on the combination of the first and second processed object objects and including at least a resulting web page;

determining whether further processing of each processing result is necessary to complete the selected function; and

transmitting at least one of each processing result and another output to the client system.
